

The industry benchmark for Australian manufactured steel sheds

COMPLIANCE. SAFETY. PEACE OF MIND.

What is ShedSafe?

ShedSafe® is the industry benchmark for Australian manufactured steel sheds. It is a third-party accreditation program that helps ensure buyers have confidence that the engineering, steel products and site specification of their steel shed meets the National Construction Code (NCC).

ShedSafe® is managed by the Australian Steel Institute (ASI), the peak body for Australia’s steel supply chain. The program was developed at the request of government regulators and building certifiers to promote compliance for cold formed sheds with the NCC.

Why ShedSafe?

Only ShedSafe® accredited suppliers have access to the ShedSafe® SiteCheck site classification program. SiteCheck enables shed sellers to ‘virtually’ place your proposed shed on your intended site.

The certifying engineer can then consider wind, snow and earthquake loads before approving the specification and site-specific engineering prior to manufacture.

This gives you peace of mind that your shed is safely designed for its intended use.

Keep your valuable assets safe in a shed that complies with the National Construction Code
